

UNIVERSITY of NORTH TEXAS

Department of Philosophy and Religion Studies

presents

A Lecture By

Dr. Susan Solarz

Conservation Education:

Preparing Students for Careers in Conservation Biology

Dr. Solarz will discuss her work to better prepare students for conservation careers through projects like the Sligo Creek Restoration Project.

The lecture will be a dialogue about challenges in conservation education and how to best prepare our students for effective and fulfilling careers.

Susan Solarz is a Scholar-in-Residence at American University. Her interests lie at the interface of science and policy. Although she is trained as a scientist, her professional background is in the national policy arena. Policy decisions that are made by people today can affect our environment for many generations. Today, much of environmental policy is set by nonscientists, and it is her interest to assist well-trained scientists in transitioning into policy positions.

Wednesday, May 25, 4:00pm in EES AT 120

This lecture is free and open to the public.
